

Ten8Tech Securing Police Reports In The Public Cloud

Utilizing Crypteron's platform Ten8Tech was able to launch to market faster and receive regulatory compliant, military grade encryption for their cloud-hosted data and focus resources on innovation rather than infrastructure software development.

Ten8Tech is addressing the issue of "too much crime, not enough cops." By managing the non-emergency crime reports that account for approximately 20% of all police reports, Ten8Tech is freeing up officers for more urgent matters.

Many law enforcement agencies are overworked and cannot serve all citizens in a timely manner. Ten8Tech's Case Service enables departments to take non-emergency crime reports from residents over the phone with an automated voice application, text messaging, and mobile and web applications.

For Ten8Tech to be able to manage police reports containing sensitive crime report information they needed to assure that data would always be secure.

The core business of Ten8Tech is providing a service to law enforcement that alleviates the workload of agencies that are over stressed due to reporting procedures. Data security is a minimum requirement to serve this market but is not a differentiator for buyers.

Crypteron's Platform-as-a-Service (PaaS) was able to provide Ten8Tech with industry compliant security for the market they serve. With data encryption taking place

*Headlines about data breaches at high-profile companies have become more prevalent. Cities want to know what we do to keep their citizens information secure. **Crypteron makes security a non-issue** with the ability to ensure all data is encrypted at the application level.*

Anthony Formhals

President and CEO Ten8Tech

within the application itself, any data passing through the network and on to the cloud is already encrypted and therefore only accessible via the application itself.

By leveraging Crypteron's off-the-shelf solution, Ten8Tech was able to add encryption and key management with just two lines of code, instead of developing, managing and troubleshooting custom code. The time saved on security development allowed this early stage company to focus its resources on core product features and customer satisfaction.

With a large addressable market, Ten8Tech looked to the public cloud for a flexible cloud-based platform to allow them to start small and rapidly scale. And since Crypteron works great with the public cloud, Ten8Tech could embrace all the benefits of the cloud while simultaneously boosting the security of their solution.

BUSINESS RESULTS

- ① **Core business systems protected from data breaches**
 - ② Saved months and reduced risk by avoiding custom code development
 - ③ Business prepared for any cloud - public, private or hybrid
 - ④ Greater focus on product features and differentiators
 - ⑤ Flexible, sophisticated data security achieved without complex, hard to maintain architecture or code base
-

CRYPTERON

INSTANT DATA SECURITY

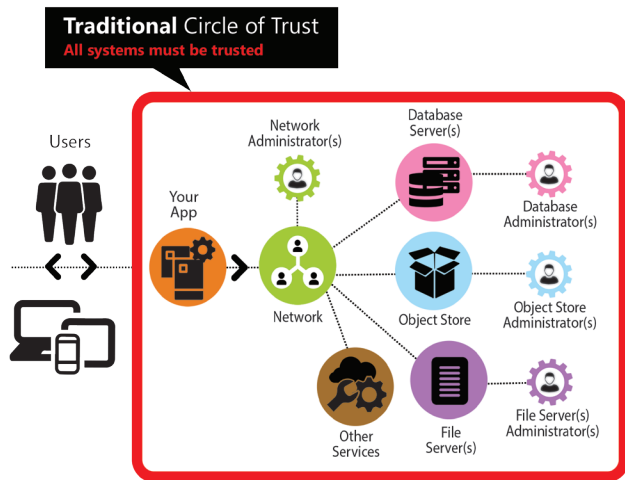

Ten8Tech credits both Crypteron and the flexibility of the public cloud as essential tools for reducing product development time. They credit their speed to market as a key factor for the rapid adoption of their innovative law enforcement solution.

Crypteron is the first ever off-the-shelf solution for data encryption in the cloud. As a result, they have created opportunities and reduced barriers to entry for innovative companies to develop new applications that would have previously been cost prohibitive or too resource intensive to undertake. Application developers can now entrust data encryption expertise to the Crypteron platform and move forward with confidence that they will not be the next news headline about compromised data.

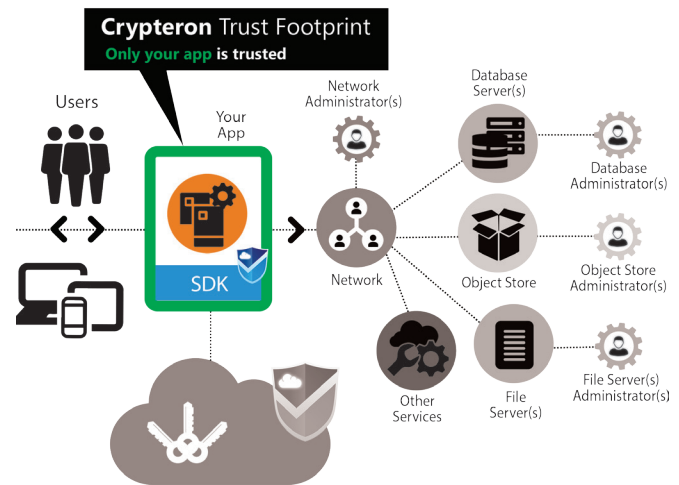

Application developers with a need to secure sensitive data can now use Crypteron to get military grade encryption with just two lines of code. With Crypteron, your sensitive data is encrypted before it ever leaves your server application, so your data remains private even in the face of a complete database breach.

ABOUT TEN8TECH

Ten8Tech uses advanced voice transcription and expert-system logic (patent pending) to enable victims to complete a police report quickly by voice. Ten8Tech's web and mobile solutions are driven from the same system logic and coupled to the voice reporting service, offering a complete product solution to every police agency in the nation.

ABOUT CRYPTERON

Crypteron is a developer-friendly platform for securing applications in the public cloud. We help developers prevent data breaches and, at the same time, achieve regulatory compliance such as HIPAA, PCI or CJIS.
